

Name of Child: _____ Date: _____

Breastfeeding and Alcohol

It is not good to drink alcohol when you are breastfeeding.

Your baby may get less milk

A **let-down reflex** starts your milk to flow. Drinking a lot of alcohol can make this reflex slow down. When this happens, you will make less milk, and your baby will get less milk.

Alcohol hurts your baby

If you drink alcohol when you breastfeed, your baby drinks alcohol, too. Alcohol is not good for babies.

When babies get alcohol through breast milk, they may get very drowsy, weak, and they may not gain much weight. Only two drinks of alcohol a day can slow down babies' growth. They learn to crawl and walk later than other babies (**slowed psychomotor development**).

**If you drink alcohol
when you breastfeed,
your baby gets alcohol, too.**

How much alcohol is too much?

Not drinking any alcohol is safest for you and your baby. When breastfeeding moms have only 1 or 2 drinks a week, they make enough milk and their babies don't get too much alcohol.

One drink is:

- 1 12 ounce can of beer
- 1 ounce of liquor
- 4 ounces of wine

**12 ounces of beer
is 1 drink.**

The amount of alcohol in your breast milk is the same as the amount of alcohol in your blood at that time. If you must drink and breastfeed, drink right after you breastfeed, instead of before.

If you drink alcohol with a meal, it takes longer for the alcohol to get into your breast milk.

Without food, alcohol is in your breast milk 30 to 60 minutes after you drink it

With food, alcohol is in your breast milk 60 to 90 minutes after you drink it

More than 2 drinks a week is too much alcohol when you are breastfeeding. This means **it is too much alcohol if you drink:**

- three or more drinks in a week
- more than one ounce of liquor in a day
- 2-1/2 ounces or more of liquor at one time (**binge drinking**)

If you drink more alcohol than is safe for your baby don't breastfeed on the next feeding. Pump your breast milk at feeding times and throw the milk out. This will keep your breast milk flowing, and will prevent plugged ducts, and engorgement.

If you want to drink less alcohol and are having trouble, here are some places you can call for help:

Alcoholics Anonymous Hotline for Phoenix area: (602) 264-1341
East Valley Intergroup: (480) 834-9033
Agua Fria Intergroup: (623) 937-7770
Intergrupal Hispana: (602) 957-7457

Now that you've read this:

Tell your nurse or doctor how alcohol can harm your baby. (Check when done.)

If you have any questions or concerns,
 call your child's doctor or call _____

Family Review of Handout

Health care providers: Please teach families with this handout.

Families: Please let us know what you think of this handout.

Would you say this handout is hard to read? Yes No

easy to read? Yes No

Please circle the parts of the handout that were hard to understand.

Would you say this handout is interesting to read? Yes No

Why or why not?

Would you do anything differently after reading
this handout? Yes No

If yes, what?

After reading this handout, do you have any
questions about the subject? Yes No

If yes, what?

Is there anything you don't like about the drawings?

Yes

No

If yes, what?

What changes would you make in this handout to make it better or easier to understand?

Please return your review of this handout to your nurse or doctor or send it to the address below.
